

# LABORATORY OBSERVATION/RECORD

**Course:** Full Stack Web Development

**Course Code:** 23CM4121

**Experiment No.:** 2

**Student Name:** J. Bhuvan Teja

**Roll No.:** A24126552084

**Date:** 25-08-2026

---

## 1. TITLE

**Design and Develop a Responsive Travel Explorer Website using HTML5 & CSS3**

---

## 2. AIM

To design and develop a responsive, visually appealing 'Travel Explorer' web application using HTML5 and CSS3 to showcase travel destinations, packages, and user reviews.

---

## 3. OBJECTIVE

The objectives of this experiment are:

- To design a responsive web page layout using HTML5 semantic tags.
  - To implement styling using CSS3 properties like Grid and Flexbox for responsiveness.
  - To create a visually appealing 'Travel Explorer' interface with navigation, hero section, and content areas.
  - To integrate interactive elements like hover effects and forms.
- 

## 4. THEORY

**HTML5 is the standard markup language for structuring web content. It introduces semantic elements that define the meaning of the content. CSS3 is the latest standard for styling web pages, enabling layouts through modern techniques like Flexbox and Grid, along with media queries for responsive design. The Travel Explorer application utilizes these technologies to create a modern, device-friendly user interface.**

---

## 5. ALGORITHM / PROCEDURE

1. Define the structural layout using semantic HTML5 tags (header, nav, main, section, footer).
  2. Develop a hero section with a navigation menu and call-to-action buttons.
  3. Create responsive sections for 'Destinations', 'Travel Packages', and 'Gallery' using CSS Grid and Flexbox.
  4. Implement styling for the user review cards and a contact enquiry form.
  5. Add CSS media queries to ensure the website is fully responsive across mobile, tablet, and desktop screens.
  6. Integrate custom fonts and interactive hover effects.
  7. Validate the layout and responsiveness by testing across different screen sizes.
- 

## 6. PROGRAM

### travel.html

## 7. CODE EXPLANATION

| Code                | Explanation                                                            |
|---------------------|------------------------------------------------------------------------|
| HTML5 Semantic Tags | Defines page structure (header, main, section, footer).                |
| CSS Grid/Flexbox    | Used for creating responsive layouts (destination grid, package grid). |
| CSS Media Queries   | Adjusts layout for responsiveness on different screen widths.          |
| CSS hover effects   | Provides visual feedback on interactive elements.                      |
| Forms               | Used for user input (Name, Email, Destination, Message).               |

## 8. TEST CASES AND EXECUTION DATA

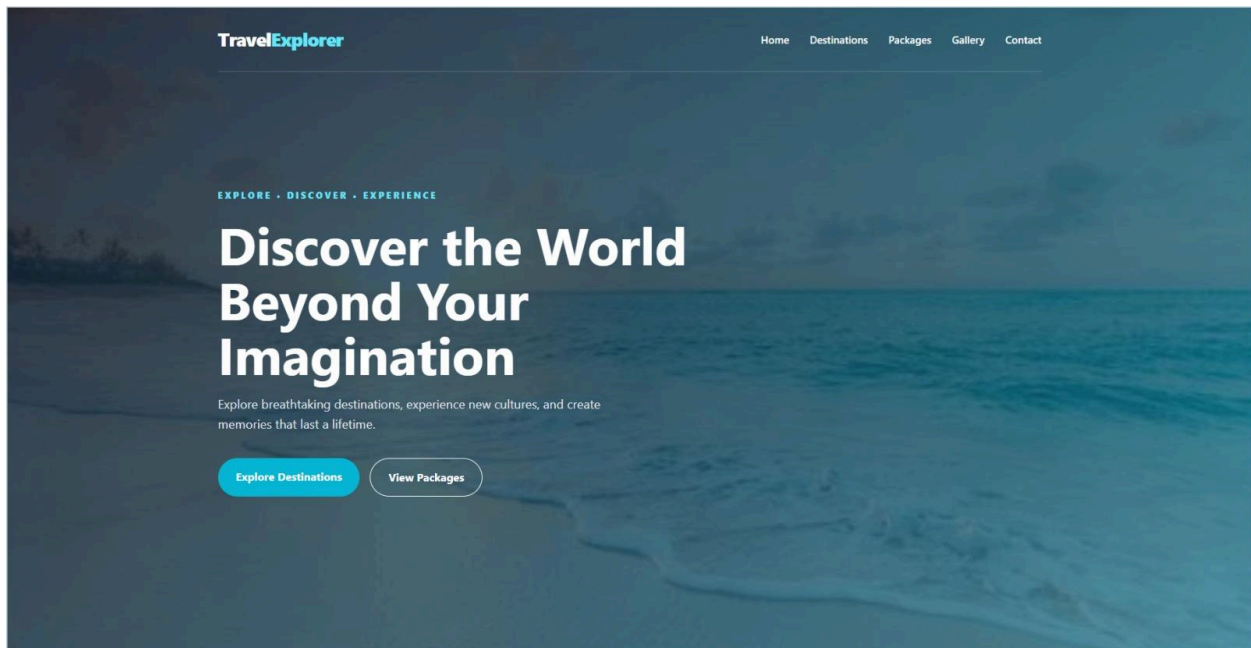

I would not just write three random test cases. I would actually execute them and record the results.

| Test Case | Feature | Input / Scope | Expected Result | Status |
|-----------|---------|---------------|-----------------|--------|
|-----------|---------|---------------|-----------------|--------|

|              |                      |                         |                                             |             |
|--------------|----------------------|-------------------------|---------------------------------------------|-------------|
| <b>TC-01</b> | Responsive Layout    | Mobile, Tablet, Desktop | Layout adjusts correctly                    | <b>Pass</b> |
| <b>TC-02</b> | Navigation           | All Links               | All navigation links function properly      | <b>Pass</b> |
| <b>TC-03</b> | Interactive Elements | Hero Buttons/Cards      | Hover effects and buttons trigger correctly | <b>Pass</b> |
| <b>TC-04</b> | Contact Form         | Submit Button           | Form accepts input and submits              | <b>Pass</b> |
